Hello,

I have went to [REDACTED] and paid over 25.00 for xenedrine..this was my first time trying out something like this. I took just one pill, b/c I wanted to start out slow, unknowingly how it would affect me the next day. First day was not so bad, except for minor dizziness and heat strokes. The next day I felt like I was having a nervous breakdown inside my body. I was feeling so bad to the point I could not stop vomitting, mind you that I have so far only taken one. Do you think this is a withdrawl symptoms. I have only taken one pill and how can this make me feel sooo bad. I think this product is very bad. I am having major stomach cramps and muscle aches. I don't know what to do. I see on your web site that you have alot of success stories but have not shared any information of how it caused others pain. I usually am not out spoken about products I have tried, no matter what I have paid for, but this one after just one pill, I will never ever try a diet pill as long as I live and I guess it was my way trying to cheat on my body. I am only 130 pounds and work out 4x aweek and thought that one pill could not do any harm, I was wrong. Even though it was my mistake to try to product out, your advertisment made me feel it was okay to try it!!!! I hope that you can refund my money b/c target would not.
