Bob,

Tim Ziegenfuss should not be considered one of the researchers on the Xenadrine study we conducted at EMU! Whatever he may "postulate" has nothing to do with the published data. As the statement is worded on the Web site, it appears to be attributed to me. Please, have it removed.

As for the Methoxy-Pro study, the language in the contract regarding publication must remain as originally worded or I am unable to do the study. There is no room for movement on this matter. I apologize that this has delayed the study, but I don't think any reasonable researcher would agree to the changes that have been suggested.
