

**Pfizer Applauds the Committee on Energy and Commerce for Passing
the 21st Century Cures Act Today**

NEW YORK, N.Y., May 21 - Pfizer applauds the Committee on Energy and Commerce for passing the 21st Century Cures Act today. Chairman Upton, Congresswoman DeGette and committee members have shown dedication to improving how medicines in the U.S. are discovered, developed and delivered to patients. Medicines and vaccines are powerful tools in stemming the tide of illness and disability that threaten an aging population. We look forward to the House of Representatives' consideration of the bill and we will continue to work with the Senate to help maintain American leadership in medical innovation by supporting patient-focused healthcare.
