We are selecting the death and incidents that we are following up on for incidents report in 2009Q2. There are a lot of death and injury incident reported from the Chevy Cobalt and Chevy Trailblazer 360 where the primary component is airbag.

I know that Donovan was looking at airbag in Chevy Cobalt before he left. I seem to remember something about the Trailblazer 360 but it may not have been airbags.

Should we be interested in these? There is nothing in field reports or aggregate data that suggest we should be concerned. We have reviewed 6 previously reported D & I for Cobalt and 1 for Trailblazer. What do you think?

I would like to have our final selections made by the end of next week.

Tina Morgan
Chief, Early Warning Division
